

Project "Autonomous NMS integration" for Central Bank of Russia

Written by Сепрей

Thursday, 19 March 2009 12:28 - Last Updated Monday, 22 March 2010 12:14

As a result of the project, the following results were achieved: - developed a system of engineering solutions to integrate of autonomous control systems

-
developed protocol descriptions for information interchange between subsystems

-
an experimental verification of the developed system of engineering solutions in the main communication center of the Central Bank of Russia

Research results can be further developed and implemented in the Integrated Management System information and telecommunication resources of the Central Bank of Russia .
