

What are preconfigured IQM options?

Usually, you can buy IQMA either pre-packaged (Small Form-Factor Micro-ITX PCs featuring Atom Dual-Core board, 2GB RAM, GigaBit Ethernet) or USB Flash Image for use with your own hardware (e.g. obsolete office Pentiums-III or Celerons).

However, there are some other options for low-speed specialized tasks:

Software IQMA module for NSG series 800 router. Provides IQMA functions for popular NSG-800 and NSG-900 routers widely used for POS and ATM terminals. Should be installed by Net-Probe only.

IQMA for ARM. We now support Sheeva Plug and are working on another implementations.
