LLC "NetProbe" has successfully installed IP Quality Monitor (IQM) SLA monitoring system in the network of the Savings Bank of Russia (Sberbank).

IQM allows bank's specialists to control the quality parameters of communication services offered by Sberbank telecom providers, to perform an active diagnosis of their IP networks to identify faults thus significantly reducing the time to resolve the identified problems.

Sberbank of Russia is the largest bank in the Russian Federation and CIS. Its assets amount to a quarter of the national banking system, while the share of bank capital is at 30%. According to the magazine The Banker (July 1, 2009), Sberbank held 38 th the size of fixed capital (Tier 1-level) among the world's largest banks.

LLC "NetProbe" specializes in development and implementation of traffic analysis, systems management and monitoring of multiservice networks. NetProbe provides services in design and development of IP / MPLS networks, outsourcing of networks' operations, systems integration.
